Reclaimed Wood Ghosts

by @jagcagdesign

PROJECT PLAN

Finished Dimensions: Varies based on Desired Size

Skill Level: Beginner

Materials

Item	Qty
Reclaimed Wood (fence panels, barnwood, etc) OR new lumber	5 (depending on design preference)
Hinges & screws	8 (depending on design preference)
Old knobs, handles, chains, etc. (optional) & screws	1 (depending on design preference)
Black and white paint (or another color of choice)	
Paint Brush	1
Black Marker	1

Tools Used

Miter Saw

Drill

Sander

Jigsaw

Battery Tip: A 4.0 Ah battery is recommended to be paired with high amp draw tools for maximum efficiency.

Assembly Instructions

Step 1

Cut the boards to the desired length.

Step 2

Sketch the desired ghost head and face. No need for perfection – the messier, the spookier!

Step 3

Drill pilot holes in the eyes and mouth (to be used as starter holes for the jigsaw cuts).

Step 4

Cut out eyes, mouth, and head shape with the jigsaw.

Step 5

Lightly sand the cut areas and any other areas of board, as needed.

Step 6

Roughly brush on paint (the more rustic you apply the paint, the spookier it looks).

Step 7

When the paint is dry, sand off the edges of the boards, as desired, to create a rustic look.

Step 8

Attach the ghosts together with hinges. Note: all boards do not have to hinge. You can attach some of them together with metal straps, pieces of scrap wood, old handles, etc. Be sure that a few of the boards hinge if you would like the finished project to stand on its own. If you create a piece that does not hinge at all, you can always lean it up against a wall!

Step 9

Attach old knobs, chains, etc. as desired, to “dress up” the ghosts.

Step 10

Enjoy your spooky, fun creation! :)
